SHARK CP LOCKING PLATE FOR CERVICAL SPINE

The SHARK CERVICAL Plate is a locking plate for the cervical spine. The system offers a good handling and broad range of applications.

Product diversity and design with a plate strength of only 1.95 mm and plate lengths of 22 mm to 110 mm and the small plate width of only 18 mm cover a large range of applications. This ensures a stable fixation benefit for users and patients.

Depending on the indication, it is possible to absolutely and exactly position the fixation screws with variable or

fixed angle by means of instruments or to lock them by means of a rotatable mechanism.

All of the implants and instruments of the SHARK CERVICAL PLATE are supplied in a non-sterile package and are stored well-placed on the set.
